INVESTIGATIVE

RIASEC is an acronym that represents the six primary types of personalities or vocational interests identified by psychologist John Holland. The model is often used in career counseling and guidance to help individuals understand their preferences and make informed decisions about their careers. Each letter in the acronym corresponds to a specific personality or interest type:

1. Realistic (R)
 2. Investigative (I)
 3. Artistic (A)
 4. Social (S)
 5. Enterprising (E)
 6. Conventional (C)
-

key characteristics associated with an Investigative personality in the RIASEC model:

1. **Analytical Thinking:** Investigative individuals excel in analytical thinking. They enjoy breaking down complex problems into smaller components and analyzing data to find solutions.
 2. **Research Skills:** Investigative individuals are adept at conducting research. They may be skilled at gathering and analyzing information, whether it's through experiments, surveys, or other methods.
 3. **Scientific and Technical Interests:** Careers in science, technology, engineering, and mathematics (STEM) fields often appeal to those with an Investigative personality. They may be drawn to professions such as scientists, researchers, engineers, analysts, or mathematicians.
-

INVESTIGATIVE
